

CLEARSCOPE

Smartphone Endoscope Adaptor

Capture. Manage. Share.

Developed by physicians
for physicians

- ✓ **Portable:**
connects to the smartphone
you already own
- ✓ **Compatible:**
works with any standard
endoscope
- ✓ **Compliant:**
listed as a Class 1 medical
device in Canada, USA & EU
- ✓ **Intelligent:**
sets up in seconds, easy to use,
no training required
- ✓ **Cost effective:**
HD quality image and video
capture at a fraction of the
cost of traditional equipment

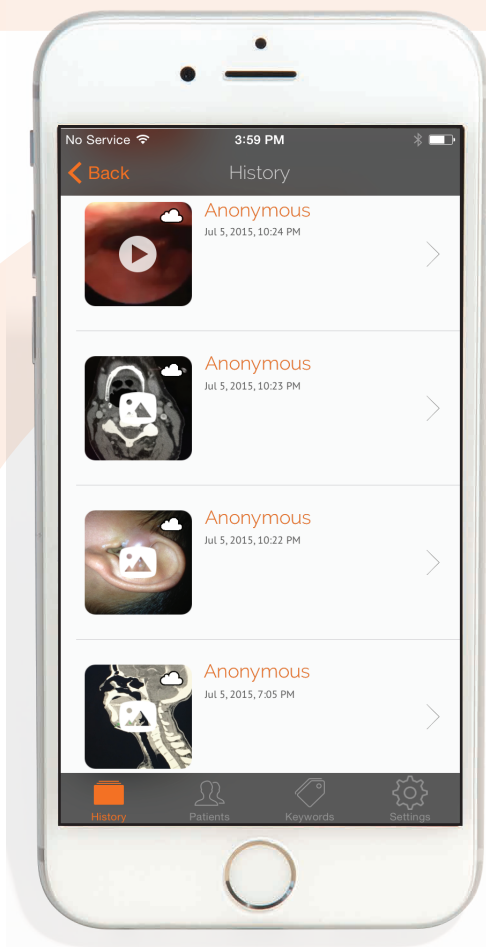

CLEARSCOPE is an endoscope video solution that connects any standard endoscope to the smartphone you already own. This innovative mobile medical technology creates a truly portable and cost effective alternative to the traditional video tower.

CLEARSCOPE makes it easy for medical professionals to securely capture, manage, and share HD quality video of endoscopic procedures.

No one can argue that access to video provides a valuable tool for diagnosing patients, teaching residents, and remotely consulting with other physicians. But traditional video capture equipment is expensive, not easily accessible, and can quickly become out dated. While mobile technology offers a portable, and cost effective alternative for endoscopy video capture, security of health information is a major concern. Until now.

Secure Medical Camera App and Cloud Storage

Private. Secure. Compliant

The app also helps to:

Secure photos & video:
Encryption and password protection lock images into a separate camera roll.

Enhance images:
Camera settings optimized for capturing endoscopy video.

Annotate images:
Add keywords, comments, patient information.

Share images:
Text or email images to colleagues, residents, event patients for teaching and consulting.

Working in compliment to the CLEARSCOPE Adaptor, MODICA is an easy-to-use iOS camera app and cloud service that helps to facilitate the private and secure capture, management, and sharing of medical images.

The MODICA app and cloud secures medical images in a segregated, encrypted, and password-protected camera roll, ensuring they never mix with personal photos. MODICA automatically moves medical images off of the device and backs them up in a HIPAA compliant cloud storage service for further protection in the event of a lost or stolen device.

This app is available today in the iTunes App store.
